

Configuração do Amazon S3 para o Projeto .NET

1. Criar uma conta AWS.
2. Escolher a região (recomendado: us-east-1).
3. Amazon S3 > Create bucket.
4. Nome único do bucket (ex.: paulo-storage-dev-2026).
5. ACLs disabled.
6. Block all public access habilitado.
7. Criptografia SSE-S3.
8. Criar o bucket.

Criar usuário IAM

- IAM > Users > Create user.
- Nome: storage-api-user.
- Criar e associar uma Policy com:
 - * s3:ListBucket
 - * s3:GetBucketLocation
 - * s3:GetObject
 - * s3:PutObject
 - * s3:DeleteObject

Criar Access Key

- Security credentials > Create access key.
- Escolher: Application running outside AWS.
- Salvar Access Key e Secret Access Key.

Configurar User Secrets

dotnet user-secrets init

dotnet user-secrets set "Aws:Region" "us-east-1"

dotnet user-secrets set "Aws:BucketName" "paulo-storage-dev-2026"

dotnet user-secrets set "Aws:AccessKey" "SUA_ACCESS_KEY"

dotnet user-secrets set "Aws:SecretKey" "SUA_SECRET_KEY"

Testar:

POST /files/upload

GET /files/{key}

GET /files/{key}/presigned-url

DELETE /files/{key}
